

PROGRAM BUILDING

At Onyx Data Solutions, we partner with a variety of organizations within the insurance carrier and employee benefit market to assist them in leveraging technology to achieve their business goals and improve their bottom line. Onyx brings decades of experience and fluency in both business and technology and works with senior leadership and internal teams across IT and business units to build and implement forward-thinking strategy and solutions.

With each client engagement, Onyx uses a three-tiered approach, focusing on people, process and technology to develop solutions tailored specifically to the needs and challenges of your organization.

THE ONYX APPROACH:

Current State Evaluation

The Onyx team evaluates existing processes, IT infrastructure, information security management and controls.

Gap Assessment

A full gap assessment is conducted to measure the organization against industry best practices and security standard baselines.

Recommendation

Onyx provides a course of action that is functional, flexible, supportable and measurable.

Implementation

The Onyx team manages the implementation and program build with senior leadership and internal IT teams.
